Hey guys DYC here today we're back with another banger, of a video & today guys I'm going to be giving a retrospective on the viral video series lego among us but before we can get into it a quick history lesson on how lego among us came to be also I am in a sub race with just vids he might of changed his name by the time this comes out he does that a lot and I will not change this anyway 1st to 10,000 loses so go to Just vids and subscribe anyway we can trace lego among us to

13.8 billion years ago when the universe started expanding & stopped being an infinitely dense soup of pure energy
10^{-43} seconds later gravity started existing with the other 3 forces are still in the electronuclear force as its called
at 10^{-36} or 10^{-32} seconds (whenever I give a range of years that means that there ambiguity as to what year it happened) that's 10,000,000-100,000,000,000 10^{-43} seconds but anyway the strong force starts existing do to it being colder now expansion of the universe bringing heat away from other pockets of heat anyway it joins gravity & the electroweak force
at 10^{-33} or 10^{-32} seconds quarks started yay! & with quarks come anti-quarks
after 10^{-12} to 10^{-5} seconds photons happened that's light & radio waves (& other stuff but that doesn't matter for lego among us)
1 second to 10 seconds electrons came (& positrons). Now we have all the particles for lego among us!
10 -1000 seconds after the big bang hydrogen that's just 1 down quarks & 2 up quarks made into a proton with a electron orbiting around well not orbiting because superposition stuff but all the atoms in lego among us will be directly observed by the camera so superposition stuff won't matter really
100 million to 250 million years after the big bang a bunch of that hydrogen got together & made a star & that star made a whole bunch of elements
4.6 billion years ago a bunch of those new elements came together & made a lot of stars, one of which is the sun! It also has a pro-planetary disc
4.5 billion years ago that pro-planetary disc made 8 maybe 9 or depending of definitions even more planets one of witch is Earth
3.7 billion years ago a microbe that can reproduce & change
3.5 billion years ago those microbes learned how to photosynthesise & now O_2 is everywhere killing a lot of the current population of microbes.
1.65 billion years ago cells now have nuclei
665 million years ago animals exist now
525 million years ago Chordate evolved out of animalia
167 million years ago mammals evolve out of Chordate mammals are animals that make milk
65.9 million years ago primates that moneys n' stuff
17 million years ago Hominidae evolve out of primates Hominidae is humans & great apes
2.8 million years ago the genus homo evolves out of Hominidae
300,000 years ago homo sapiens become a thing (that's us)
~56,800 years ago 1st people in europe
~5,000 years ago 1st governments
753 BC Rome was founded as a kingdom

534 BC Lucius Tarquinius Superbus took power and the kingship by force but Lucius Junius Brutus & Lucius Tarquinius Collatinus didn't like this & took it back in 509 BC by aligning themselves with the senate this started the Roman republic
190 BC Rome expended & by now their sphere of influence was the whole mediterranean sea
49 BC Julius Caesar takes power by force ending the Roman Republic until 23 stab wounds put Publius Cornelius Dolabella in power
27 BC Gaius Julius Caesar Augustus became 1st roman emperor after defeating Marc Anthony at the battle of Alexandria
330 constantinople became the capital of Rome do to it being closer to the battlegrounds Rome was fighting in the battle of Alexandria
395 Rome split in 2 one with constantinople as its capital & one with Rome as its capital
410 England gets its independence from Rome
476 fall of the Western Roman Empire but east is still fine
637 or 638 Jerusalem falls into muslim hands
1066 William conquers England & becomes her king
1096 1st crusade to take Jerusalem back; it fails
1204 sack of Constantinople during the 3rd Crusade crusaders invade constantinople
1215 Magna Carta signed saying the king isn't above the law
1492 Columbus discovered America
1607 UK starts to colonize the americas
1707 Scotland & England become 1 country (great britain)
1754 French & Indian war
1775 Start of the revolutionary war
1776 declaration of independence
1778 France aligned with the US
1783 US wins the war
1787 constitution written
1822-1825 first picture made by frenchmen Nicéphore Niépce made using Bitumen
1830-1850 trail of tears starting Oklahoma
1857 first sound "recorded" he couldn't play it back but he did get the sound wave on paper
1861 first color photo well their photos that were painted over to be in color before 1861 but that doesn't count
1874 first "video" was created it was really just 2 pictures taken from the same place but technically a video
1877 first sound that could be played back was made
1888 the first mass produced camera the Kodak was created also in 1888 1st video that could be played back without having to manually flip though the images
1889 Oklahoma land run 50,000 people came to Oklahoma to claim some land the government just claimed from the indians living there this was also when OKC & Guthrie were founded
1907 Oklahoma becomes a state
1945 first computer the ENIAC
1957 first image on a computer
2005 Youtube was made
2018 among us was made

2020 DYC was created by Daniel Bleep himself & also in 2020 Lego Among us was created getting the idea from the hit game among us it was originally going to be with people being the crewmates instead of legos but being that it was hard to get a large group together for recording he began construction on lego versions within the day all the legos & cards were made & recording of lego among us could begin the description reads “Today we explore the question of ‘is it possible to play among us with legos?’” The description was written by Andrew who is also the camera man from many early DYC videos

We open on a shot of Daniel Bleep greeting us while sitting in his room starting from the top left & working our way down-right as one would read english we see a window by how bright it is it is day time curtains a calendar with text I couldn't make out door with windows a Plant Vs Zombies Crazy Dave Funny Characters Poster made by Thompson Murphy it sells for $17.35 & is 5.5” by 8” with this we can get measurements for other things in the shot which you can do because I don’t know how to account for depth of course Daniel in the center wearing a red shirt & yellow pants & as we’ll later see blue nike shoes with a red outline & white socks of a nike swoosh a blue box containing a yellow toy car I couldn’t find the exact car online the closest one is the 1 by 18 Scale R-C Chevrolet Camaro RS SS Yellow with Black Stripes Radio Remote Control Model Car but the one in the video has a black thing on the roof but not online I found though means you will see later in the video. I contacted Daniel Bleep and he said the original car that was used a remote control car transform toys no.9950. It currently sells on Ebay for $25 and comes with a shirt https://www.ebay.com/itm/134986134457 . also in the boxes are hefty ziplock bag & a yellow WEDGiT next to it is a red box with 2 hefty ziplock bags & a red pitchfork you can find a longer version of it at https://www.spencersonline.com/product/pitchfork/6660.uts Daniel later wrote that part of it broke off & thats why it’s shorter then there's a green box with say it with me a hefty ziplock bag a spike ball & some “I survived books”? I think hard to tell we have the latch to open & close the window & there seems to be something else above it but I can’t make it out a blank poster board wooden box holder thingy a blue box with legos a red helicopter & later we see a HOT WHEELS ULTIMATE GARAGE it comes with the very same red helicopter & what looks to be something else but I can’t make it out  green box with more legos red box with a plate & a lego set we saw earlier in the blue box a constellation chart a green box with something I have no idea what

anything is in there except a hefty ziplock bag… blue box with a lego heart a basketball shooter thing some brown “trader joe's” bags some cardboard boxes with the number “10” on them atop a Duplo Front End Loader Body & a lego set a whistle hat a WEDGiT tower (from the top down is green green white green yellow green yellow blue red blue yellow blue red blue yellow green white) I should mention that WEDGiTs are color coded so that the red square is always the biggest the order from largest to smallest is red blue yellow green white I should also mention that the top green WEDGiT is sideways a wooden floor a red box with a fidget spinner what look to bag magnets & a bag a blue box with a plate & legos some plastic thing I can't make out

2 Crocs CLASSIC LINED UNISEX - Slippers - Mushroom Bone Bronze a lego car a rug a blue Slope 45 6 x 4 Double lego a lego that appears in two lego sets Helicopter and Limousine & Public Transport now that I fully explained the background we can finally get into the video! Daniel starts off the video by saying “Hello everyone today we’re going to some among us with these little lego figs” he holds up yellow who is made of 2 1x1s 3 1x2s 1 1x4 1 2x2 a Container, Box 2 x 2 x 2 Door with Slot & a Container, Box 2 x 2 x 2 all yellow of course to make scripting easier every individual lego piece will have its name as listed in bricklink except for the full bricks like the 1x4 just mentioned for yellow anyway next Daniel says “That I built um” at about this point Andrew points his camera down a bit putting a ty beanie ballz yukon stuffed husky into view as Daniel Bleep lists off the Characters saying “We have orange red black white gray light gray blue yellow & green” Orange has 4 2x2s but this the only orange part of him he has a yellow Container, Crate 3 x 4 x 1 2/3 with Handholds connected with his head by a string with End Studs (10L Overall) with (Same Color) Studs Pattern red has 3 2x2 and 2 1x2 both red & a Light Bluish Gray Plate, Round 4 x 4 with Hole black has 4 black 2x2 and a red Technic, Brick 1 x 2 with Hole witch is the symbol of the website I’m using for the bricks along with bricklink it’s called Brickognize white has 1 white 2x2 1 white 1x4 1 white 2x1 & 3 white Brick, Modified 1 x 2 with Channel & a mini-fig as a hat with a white Hips and Red Legs a Torso Batman 'R' Symbol, 4 Yellow Clasps and Belt Pattern / Green Arms / Black Hands but his arms are a darker shade of green than any image I can find

the arms are detachable so mabey Daniel just replaced them Minifigure, Head Black Thick Eyebrows, Large Reddish Brown Eyes, Nougat Cheek Lines and Chin, Furrowed Brow Pattern - Blocked Open Stud head with a Minifigure, Headgear Hood Fur-lined with Blue and Gray Fur and Jedi Order Insignia Pattern hat (a hat on a hat!) later white gains a Minifigure, Shield Triangular Short with Dark Green Dragon on Bright Light Yellow and Bright Light Orange Quarters Background Pattern but in the 1st lego among us he doesn't have it gray has all in dark gray 2 1x2s 1 1x4s 1 2x2 & a Technic, Brick 1 x 4 with Holes & finally as a hat a yellow Wedge 4 x 4 Taper without Stud Notches light gray has a dark gray Container, Box 2 x 2 x 2 - Top Opening & all in light bluish gray 2 2x2s & 2 1x4s blue is the simplest no hat & only 3 pieces 2 2x2s & 1 4x2 Green (we already went over yellow & I don't this video to come out in 2026 it might anyway we'll see how long have I been working on this 2 months 2 days well 2 mounts 1 day & 23 % 1 minute to be exact it feels a lot longer though & this is still the scripting by the time I finish it it must feel like a lifetime ago I started this) anywho green has 2 1x2s 1 4x2 & a 2x2 & green has the largest hat by far with a Door, Frame 2 x 4 x 6 while saying each characters name he picks them up & puts them next to him next Daniel says "now even though there's 9 characters I only made 8 cards" these cards are what is used to pick the imposter in this episode they are made of white printer paper why he made 8 cards for the 9 characters is still a topic of hot debate in the lego among us fandom next he says "So the last person will be guaranteed to be crewmate okay" he does have a solution for the issue of not having enough cards by making the person who doesn't get a card crewmate this does mean that who is & isn't crewmate is not entirely random & Daniel does have some agency in who is crewmate "So now as you can see I have been shuffling the cards so I don't know whose going to be imposter or crewmate" Daniel has been continuously cutting the cards its true he been cutting the deck from 0:00-0:02 0:07-0:07 (this one lasted under a second before he started listing off all the characters) 0:17-0:18 and finally 0:21-0:36 Daniel then places down each card with a lego Among us character on top of it first white then green then red then blue who has a yellow marble from (what was at this point) Daniel's most popular video Marble tournament! Yellow marble was in round 4 of the tournament yellow after being in 1st for the whole race fell out just before winning & had to start all over getting a final time of 42 seconds & was put in the loser pile in the final race with all 8 marbles yellow was 3rd though the blue green & red 4th though the yellow & placed 4th overall anyway back to lego among us the next 1 to be placed on a card is black then orange followed by yellow then light gray meaning gray is the 1 without a card & will be a crew mate Daniel then says "& other gray" impling that his name is other gray unlike "gray" as he called him earlier he says something as he checks blue's card but I can't make it out however just before checking blue's card his hand hovers over yellow's card as if he's about to check it but then changes his mind & checks blue's 1st then changes his mind again and slightly lifts up yellow's before changing his mind 1 final time and checking blue's then light grey's after this he says "Okay" then he checks black's then red's then green's then oranges while checking oranges he says "and he's imposter" meaning orange got an imposter card =0 then white's card is checked & finally yellow's then Andrew says "I think its the red 1 look at the red 1 again" to witch Daniel says "Oh" Andrew said "I think its the red 1 look at the red 1 again" do to only 1 imposter being found when the episode should of had 2 Daniel then says "I guess red sus really helps here" the next thing Daniel says is "Okay" & then puts all of the lego figurines next to the previously mentioned Slope 45 6 x 4 Double Daniel then says "Lets put everything thing then on the

cards in a pile" & puts all the cards next to the minfigs he then says "Lets put them around the emergency meating button/" The emergency meating button being the blue Slope 45 6 x 4 Double mentioned earlier when the camera pans down to the emergency meating button we already see White orange & green there but after anilysing the footage I'm 98% confident that green was last and like 25% confident that orange was 1st putting White as 2ed the other amoungites are easier to place yellow was next to the button then light gray then blue then dark gray then black Daniel picks both dark gray & black at the same time but dark gray does make it to the emergency meeting button 1st this does cause green to fall over do to dark gray gray's hat touching green's hat Daniel then drops dark gray to pick up green causing dark gray to fall too! He then picks up green & then dark gray & then red get put on the emergency meeting button he is even pressed down so he is connected like this (*connects 2 lego bricks with each other*) daniel then says "good" now after 5 pages of script describing 2:27 of video we can begin lego among us. Daniel picks up orange and moves him NW for this we assume yellow's position on the emergency meeting button is due north he then moves orange south before picking up dark gray & moving him south as well then he gets red and moves him west then he picks up dark gray before dropping him AGAIN and dark gray falls AGAIN then he picks up both orange & red and they both go south the Andrew picks up light gray and we get to see that red has fallen over he then taps red with light gray then goes over to orange and says "Can I kill orange right now?" the answer is of course no orange is an imposter along with red but while he is asking that Daniel picks up green and moves him south he then drops green causing green to fall but picks him up quickly but back to killing orange Daniel says to this "I was trying to get red I thought red was going to kill orange but" then he trails off & Andrew says" all right we can both him he's dead" so light gray is the other imposter got it Daniel then uses red to shove orange off to the side and then moves him north east & then picks up light gray & has them both move north east he then says "& then gray kills… other gray" this starts the gray other gray naming system witch will be used other videos other gray in this case is dark grey also speaking of gray I've been weirdly spelling it G-R-E-Y & G-R-A-Y so I looked up witch was correct & there both correct name 2 other words with the same meaning same pronunciation but different spelling (well color colour labor labour stuff like that) the captions BTW use G-R-E-Y then both red & light grey go west before he drops them and they lie flat on the ground then he picks up blue and black and moves them both a bit west as Andrew says "gray on grey" gosh I spelled it both ways in the same sentence let me spell it a few more times grey gray grey grey grey gray gray I seem to use grey more weird I have never thought of this but apparently I have been spelling grey 2 different ways my whole life! Anyway Daniel then moves white west and yellow east shoves red west then continues to move yellow east with green then a emergency meeting is called with Daniel saying "emergency meeting" red and light grey are both dropped on the blue Slope 45 6 x 4 Double at the same time then yellow & green are with yellow inside greens hat he then turns green & yellow falls out of green's hat he then stands green & yellow up next to the blue Slope 45 6 x 4 Double next to the blue Slope 45 6 x 4 Double is black then Andrew destroys grey (breaking his hat off) saying "Gah" then red goes to the blue Slope 45 6 x 4 Double then Andrew says "just had to destroy him" then white & blue go to the blue Slope 45 6 x 4 Double then Andrew says "so how are they gonna vote?" then Daniel says "I guess green wil say 'yellow did it'" then while shaking green he says "'yellow did it I saw him right next to the body" then while shaking yellow "no green did it I saw him right next to the body as he reported" now this can't be true as this was an emergency meeting not a reported body at an interview Daniel was asked about this discrepancy where he said "I'm pretty sure I misspoke when I said 'emergency meeting' it was

always going to be a body reportation meeting" next Daniel says this time while shaking red note here the shaking of the characters is to show that there talking "Nah I'm voting yellow on this one" while shaking white "me too" he then puts many lego among us characters that have fallon back up on their feet 1st green then blue while saying "I think I'm skipping" while shaking black he says "I'm voting yellow" while shaking grey "yellow" "yellow is not the imposter" he shoves yellow aside north westerly Andrew then says "wow" he then moves back east along with light grey then Andrew moves green south as Daniel moves red north along with blue going west Andrew then makes green pivit west while Daniel moves white south he then moves red and blue north then Andrew picks up white and says says "here green and yellow or white and and green (as Andrew says "green" Daniel moves orange to the dead pile with yellow) … could be buddys" he puts down White and moves green such a way that it looks like there holding hands Daniel moves grey to the death pile too still with his hat removed from the "gah" event Daniel then kills black with grey even though it was orange and red that were the imposters >=(x then grey moves east Andrew then says "another murder taking place blue and red then move south Daniel then moves white north while he moves him north he accidentally nudges green a bit north before green falls over white then presses the emergency meating button as Daniel says "BMMM" White of course is already there then red is next then green then grey then blue Daniel then knocks over white white then hits red causing him to fall over then white says "I think yellow (I think he's saying yellow) might be right on this one" referring to yellow saying "no green did it I saw him right next to the body as he reported" accusing green white then confirms this by saying "its green" then blue says "I don't think it is skipping again" Daniel then moves blue east knocking over grey Daniel then rights grey then green says "yah green" red says "green" then green says "I'm voting blue" then Daniel says "green was not the imposter" then grey says" imposters red" then daniel moves both grey and red north as the video ends this is what the transcript of the video is in english (auto generated)

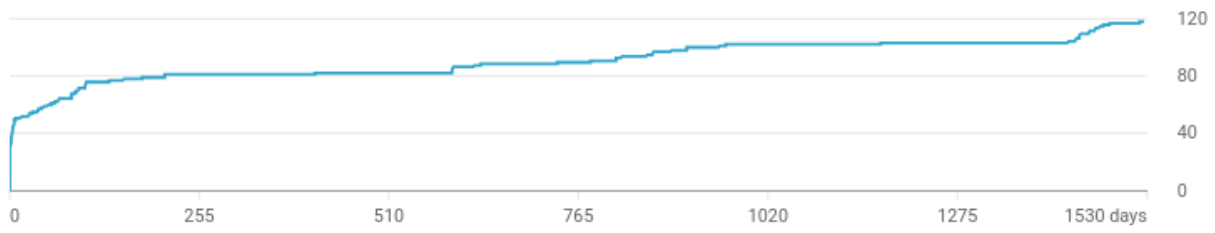
0:00
hello everyone today we're going to do
0:01
some among us with these little lego
0:03
figs
0:06
i built um we have
0:09
orange red black white gray
0:13
light gray blue yellow and green
0:18
so even though there's nine characters i
0:20
only made eight cards
0:22
so the last person will be guaranteed to
0:24

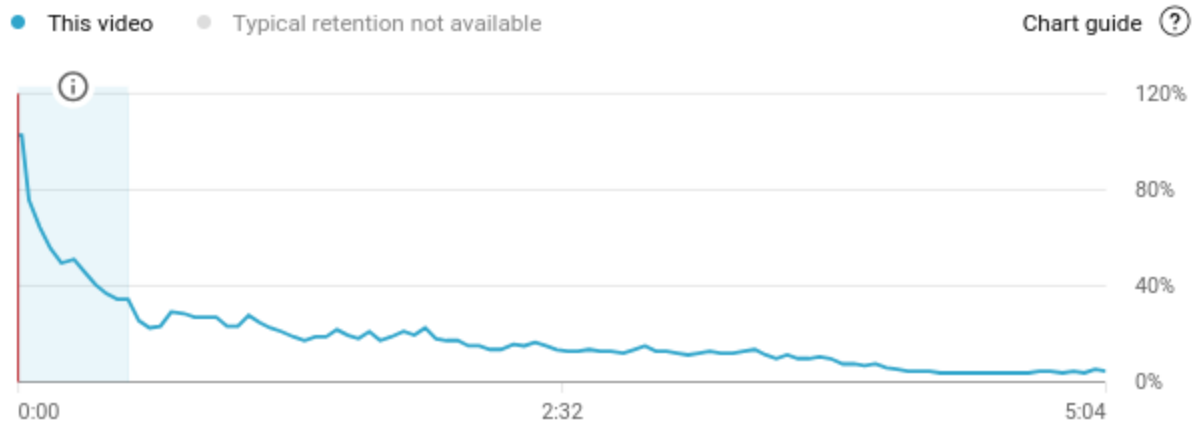
be crewmate
0:26
okay so now as you can see i have been
0:29
chuckling
0:30
the cards so i do not know who's going
0:32
to be imposters
0:34
or crewmates
1:10
okay
1:20
and it's impossible
1:26
i think it's the red one look at the red
1:27
one again
1:31
well i guess red sauce really helps here
1:42
okay
1:46
let's put everything through the cards
1:59
let's put them around the emergency
2:01
meeting button
2:34
okay
2:42
can i kill orange right now i was
2:45
trying to get red i thought rap was
2:47
going to kill orange but
2:49
all right we can both kill him he's dead
2:55
and then grey kills other grey
3:01

grey on grave violence
3:14
we're just reading
3:25
just had to destroy him so how are they
3:29
gonna
3:29
[Music]
3:30
vote i guess green will say
3:33
yellow did it yellow didn't
3:36
i saw him right next to the body how
3:39
green did i saw him right next to the
3:41
body as he recorded
3:46
now i'm putting yellow on this one me
3:48
too
3:52
i think i'm skipping i'm voting yellow
3:54
yellow
3:57
yellow is not the imposter
4:00
wow
4:12
here green and yellow or white and
4:15
and green could be buddies
4:23
another murder taking place
4:34
[Music]
4:40
um
4:44

i think dylan might be right on this one
4:47
it's green
4:49
i just don't think it is skipping again
4:54
yeah green green i'm putting blue
4:59
screen with something in foster
5:02
imposter's red

The longest the video goes without captions is from 0:34 to 1:10 witch is the time where Daniel passes out the cards this video leaves us with some interesting questions how did red kill orange when they were both imposters how did light grey kill grey and orange and grey even though he wasn't an imposter did Daniel ignore the cards and make light grey an imposter instead of orange? That would explain the abrupt ending as grey and red could of just killed blue and white immediately winning the game but then why didn't Daniel say "grey (remember except for the introduction at the beginning of the video Daniel has never used the light grey/grey naming scheme) and red are the imposters" is he trying to confuse us anyway after just 2 days lego among us was at 34 views surpassing marble tournament for Daniel's most popular video after 8 days 50 it continued to rise slowly over the coming months but after 103 days and 76 views they stopped after another 107 days the video only gained 5 views after that there were no views for a while until February 4 2021 were it gained 1 view that seemed to be the end of the story until on august 9 2021 boom 4 views in just 2 days after that lego among us kept on getting views hitting 100 on june 21 2022 Daniel had plans to put out another lego among us video when the original hit 100 but decided against it when the time came but on august 4th 2023 almost 1 year to the day it stayed frozen at 102 views until march 8 2024 were it gained 1 view and stayed at 103 views until november 16 2024 were just like august 9 it had a surge of views on that countries to this day (2/23/2025) I don't know if I'll remeber to update this when the suge ends most of these views might be from me anylising the footage for this video but on November 16 I had scripted only out to "1874 first "video" was created it was really just 2 pictures taken from the same place but technically a video" so I don't think that is it. Looking at retention 103% at 0 seconds 0:52 average view duration but only 49% of people were watching at the 12 second mark





On Feb 23 2025 the video's location was changed to OKLAHOMA. On to LEGO AMONG US 2 (Electric Extravaganza) it is 9 minutes and 7 seconds long; its description reads "Hello Everyone! Today we are revisiting our most popular video idea. I think we have topped LEGO AMONG US 1. Enjoy the electronic extravaganza. Black is sus!" In the start of this video we see mostly the same set up but with a level in the far left and a back of dominoes in the far right we also see a marble run using some of the parts for marble tournament to left of that a collectors dominoes 136 shiny jumbo color dot dominoes double 15 starter piece included a nickelodeon slime color changing slime box which you can buy from https://www.ebay.com/itm/176947631373?chn=ps&mkevt=1&mkcid=28&google_free_listing_action=view_item&srsltid=AfmBOoo3GD_Ibe_i9X6Fki11K_oFSf2ZDBOYq4F1j_syu5xynYaHd83wxN0 for just $13.09 and a huge box full of legos it also has Neon from imovie playing the whole time said song currently has 490,856 views on youtube Daniel starts the video by saying "hello everyone this is un lego among us part 2 so you guys seemed to really like the last one 33 views thats the most on the channel (its at this point we see a good look at the carpet we can see pieces of paper in a 9x9 grip with 2 out on the top one above the top center of the 9x9 grid the other above the top right of the 9x9 grid. To the left of the paper above the top center piece of paper is a pencil and to the left of the pencil is black the below black is yellow the below yellow is green the below green is white the below white is blue the below blue is red the below red is light grey the below light grey is orange then to the right of orange is dark grey toppled over we can also see 2 lego build (note to future Daniel please provide a description of the builds or not it would be kinda funny if you left this in)) *inhail* so I made a second so I made a 2ed one

I started this on October 19 2024 at 3:21 PM I have no idea when you are hearing this or when this video will come out but it's a miracle you made it to the end this video like so many other things I made will not be seen it will drown in the sea of content on the internet it will be forgotten you might see this as a failure but I don't this video got completed unlike my video ideas for wikipedia articles based on how many other articles link to it or my idea for finding outliers in songs I listen to one of these songs is A Little Christmas Music by Lena Orsa it has 4,489 views https://www.youtube.com/watch?v=h7ffktT3Dhs it was popularized by a video https://www.youtube.com/watch?v=7O2CBgWshiM&t that has 274,480 views where it was the background music & was linked in the description bill nye got nearly double that & yet my newest video has 21 views success it not about views A Little Christmas Music is an amazing track its about what you make if you have fun laying your thoughts out for future you to see to

not forget past you this is why I still code on scratch even though 0 people actually go to my account play the games I spent 10s of hours making bye (my favorite map projection is the Goode Homolosine & yes the stereotype is correct)

This is the end right? no! I need to make that time card as ridiculous as possible. That's the point of a retrospective & what this video is arguing against by pushing this notion to its logical extreme, more borderline useless junk on the internet. Just like Lego among us is; a useless piece of the internet sitting on a forgotten server rack in youtube headquarters so is this whole video there is a lot of junk on the internet (just look at twitter) & it will probably be like that for a while & that's a problem we have reached the limit for encoding data (in base 2 at least) per cubic meter if try to fit any more data it will be quantum computing witch is not a good medium at all for data storage as each cubit can be a 1 or a 0 depending on how it feels that day or maybe sometime later we will find some pattern that makes it tick but I doubt that will happen I mentioned in base 2 witch is what we currently use but we can make it base 4 we currently use electrons to encode information if its in one place it's a one if in another it's a zero but we could use positrons too giving us 4 different states each cell can be in why not quarks too gluons the number of subatomic particles is Up quark down quark charm quark stange quark top quark & an anti verson of each the electron the electron neutrino the muon the muon neutrino tau (no not the number) & the tau neutrino the are also anti verson of all of these particles their are also photons W bosons anti-W bosons Z bosons red anti-red gluons, red anti-blue gluons, red anti-green gluons, blue anti-red gluons, blue anti-blue gluons, blue anti-green gluons, green anti-red gluons, green anti-blue gluons, green anti-green gluons & the higgs boson their are probably more we havent discovered so light will be harder to use because of the speed of light I do have a solution but we need a surface that is infinitely reflective we will meuser were the light particles is at some fixed time if it is on one side of the canber with the infinitely reflective material it will be a zero if it is on the other a one with this we can up our information per square meter by 34 times but we can have 2 particles in a chamber a once or 3 or 4 or 5 or 6 so on with this we can up our information per square meter compared to what we have today by $2.95232799 \cdot 10^{38}$ that's plenty! So not a problem at all assuming we can build all this stuff (higgs bosons & positrons don’t come cheap) but it's theoretically possible & as a person who likes math that's all I need (theories are fact there) what now uh Bill nye the science guy but every time it says bill it resets form memory you guys loved that the 1st time & the 2ed not so much the 3rd or 4th or 5th what am I even pondering this for as I said earlier it’s a miracle anyone would make it here I should just leave it a black screen but if someone does I need to put something they clicked on this video for 12 hours of background noise if I stop they might put on a podcast or a song or 3rd thing & as I also said earlier this is all useless & higgs bosons don’t come cheap there's a reason we only use electrons I got it

In NYC on september 11… 1974 the mets & Cardinals would play a game for the record books the game wouldn’t end a reliever pitched 9 scoreless innings in the 25th inning the cardinals would finally score but just 1 point met cram would hit a solo single … he wanted to win … in the 32ed inning the umpire Ed Sudol would see a pitch and he didn’t call ball or strike he had fallen asleep the pitch had to be done over again. The commissioner of baseball was in attendance at this game he was still their

2ed Daniel starts talking at the same time in red

In the 403rd inning inning cram pitched the 14th consecutive perfect inning
In the 43rd the Cardinals loaded the bases with none out 3 strikeouts
In 617th the mets sent out Jane Andrews who they found off the street the Cardinals didn't have this opportunity
In the 141st inning the Mets reached home plate the umpire was asleep again they had to redo the play
The Cardinals in the 5,674th had their outfielder collapse from exhaustion he played 104 innings without a break
In the 354th the oblivious cubs came to play against the mets only to see the Cardinals already their still there the
In the 14,567th inning the MLB playoffs were supposed to start the commissioner was still there many players forgot the playoffs this was their world series
26 years to the day the game finally ended the mets won on most any other day this would be the biggest news of course this game couldn't get a good ending the NY apples and arches ceased to exist and baseball continued
